安全强劲——满足严格传动要求的三角带

Safe and strong - V-belts for demanding drives

等长匹配三角带

Matched-set V-belts

等长匹配 L=L 三角带

免配组 L=L 三角带是采用一流技术和一步法高精度工艺生产的长度完全一致的三角带产品。康迪泰克 L=L 三角带长度公差遵照 ISO4184、BS3790、DIN2215、DIN7753/1 等标准，搭配时无需再次核对皮带装置。

Matched-set V-belts

Matched-set L=L V-belts are manufactured to be of exactly the same length in a one-stage, high-precision production process using state-of-the-art technology. ContiTech L=L V-belts can be fitted without the need for further checks in belt sets with belt length tolerances in accordance with standards ISO 4184, BS 3790, DIN 2215, DIN 7753/1 among others.

L=L 三角带

多槽传动中具备以下特性

- › 一致的负荷分布
- › 运行平稳
- › 高动力输出
- › 成效效益高

L=L V-belts

guarantee the following for multi-grooved drives

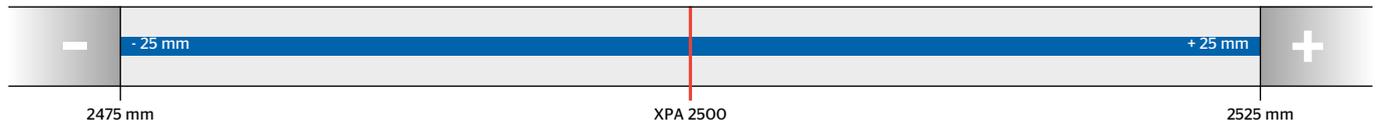

- › uniform load distribution
- › smooth operation
- › high power output
- › high cost-effectiveness

制作公差参照样品 XPA 2500 切边窄边三角带

Production tolerances using the example of an XPA 2500 raw-edge narrow-section V-belt

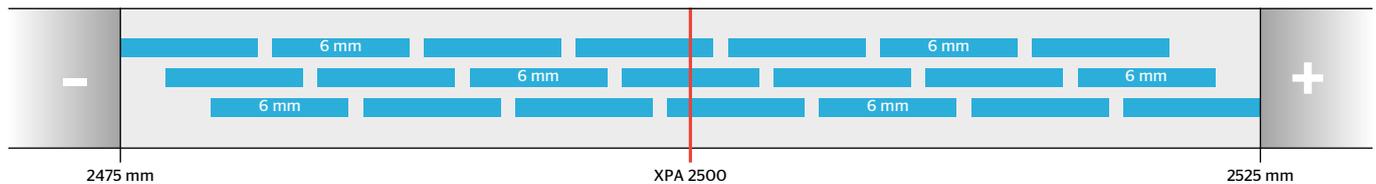

- › 单条传动带公差依照 DIN 7753 标准，为 +/- 25 毫米（长度：2475 - 2525 毫米）

The individual belt tolerance to DIN 7753 is +/- 25 mm (length: 2475 to 2525 mm)

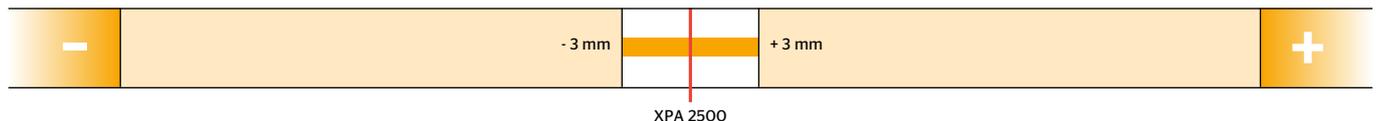

- › DIN 7753 设定配组公差为 6 毫米（长度在 2475 - 2525 毫米内即可）

The set tolerance to DIN 7753 is 6 mm (anywhere in the length range between 2475 and 2525 mm)

- › 康迪泰克 L=L 要求的设定公差为 6 毫米，以公称尺寸分组

The restricted ContiTech L=L set tolerance is 6 mm, grouped around the nominal size

基准长度 Ld (公称尺寸) 依照 DIN 标准
Datum length Ld (nominal size) to DIN

导电性

带有 EL 标志的康迪泰克三角带导电性依照 ISO 1813 的规定。

导电性能可安全地消散静电电荷，防止产生火花。因此，康迪泰克三角带可用于存在由可燃气体与灰尘/空气混合而造成爆炸危险的区域。前提是运行机械经过适当的接地处理。

Electrically conductive

ContiTech V-belts bearing the EL mark are electrically conductive to ISO 1813.

The electrical conductivity safely dissipates electrostatic charges and prevents the risk of sparking. ContiTech V-belts can therefore be used in areas where there is an explosion hazard as a result of the ignition of combustible gas and dust/air mixtures. A precondition for this is that the working machine is properly grounded.

动力比较

Power comparison

在设计皮带传动时，往往有多种类型的皮带可供选择。为确保达到理想的传动效果，延长皮带寿命并降低维护成本，选择正确的三角带至关重要。

使用前，应始终先行测试切边窄边三角带是否可用。该类三角带动力输出、效率最高，使用寿命最长。可用于带轮直径较小、高带速、大传动比的装置。由此传动装置的设计可更加紧凑，同时也降低总体成本。

Several belt types are often possible when designing a belt drive. The correct choice of V-belt is key in ensuring the ideal power transmission and belt life and reduces maintenance costs.

The use of raw-edge narrow-section V-belts should always be examined first. These belts have the highest power transmission, the best efficiency and the longest service life.

They can be used with smaller pulley diameters, a high belt speed and a large transmission ratio. Drives can therefore be designed to be more compact and have lower overall costs.
